FINNOAQ AGRO-INDUSTRIAL TECHNOLOGIES LTD.

FORMAL TRANSMITTAL MEMORANDUM & COVER LETTER

TO:	Dr. Archisman Ray, CEO & Director, Harakutir (Kolkata)
FROM:	Sourish Senapati, Lead Chemical & Process Engineer, FinnoaQ
ACADEMIC ADVISORY:	Dr. Archisman Ray, Department of Chemical Engineering, IIT Kharagpur
DATE / REF:	19 October 2026 | Ref: FNQ-PR-2026-001
SUBJECT:	Submission of Phase 1 Scope of Work & Commercial Proposal Rev V10 (Toor Dal Diagnostic Study)

Dear Dr. Ray,

We are pleased to formally submit our revised, evidence-gated Phase 1 Scope of Work and Technical-Commercial Proposal (Revision V10) for the comparative diagnostic study of imported Tanzanian split toor dal versus an Indian benchmark.

This proposal strictly adheres to the baseline scope, commercial terms, and operational boundaries defined in the primary project SOW, while correcting previous scientific and numerical discrepancies. Specifically, Revision V10:

1. Preserves Diagnostic Scope Boundaries: Confirms that Phase 1 is strictly a diagnostic R&D investigation to establish empirical ground truth, isolate rate-limiting softening barriers, and discriminate across 10 competing scientific hypotheses. Treatment development (Phase 2) and industrial plant FEED (Phase 4) are formally bounded as gated downstream stages.

2. Reconciles First-Principles Mass Balances: Independently resolves the pre-dryer moisture and solids-loss contradictions in the provisional 15 MT/day processing scenario, documenting both Scenario B1 (true 28.0% WB; 3,678 kg/day evap) and Scenario B2 (18,590 kg/day wet stream; 28.77% WB; 3,878 kg/day evap) and confirming that industrial sizing remains provisional pending empirical Phase 1 laboratory data.

3. Segregates Chemical Reagents & Dosing: Separates sodium bicarbonate (INS 500(ii)), sodium carbonate (INS 500(i)), trisodium citrate (INS 331(iii)), and hydrothermal conditioning with exact solution and grain-basis dosing specifications, labeling all candidate formulations as untested Phase 2 research hypotheses.

4. Confirms Commercial Baseline: Fully validates the indicative professional fee of ₹1,73,000 + applicable GST (ceiling up to ₹2,00,000 + GST), the 20–25 business day timeline, and the 40% / 40% / 20% milestone schedule.

To initiate project mobilization, Harakutir is requested to review Section 18 of the proposal, confirm selection of Option 1 (Baseline ₹1.73L) or Option 2 (Multi-Lot Variation ₹2.85L), and dispatch the requisite 2.5–3.0 kg sample consignments accompanied by the enclosed Metadata Form.

We thank you for the opportunity to partner on this foundational R&D initiative.

Sincerely,

Sourish Senapati
Lead Chemical & Process Engineer
